			03/18/2008 PAPER	

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

10/786,349

**Applicant(s)**

BUERGER ET AL.

**Examiner**

MICHAEL G. MILLER

**Art Unit**

1792

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 18 December 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 13-33 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 13-33 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/CDC)
- 4) ☐ Interview Summary (PTO-413)
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_
- Paper No(s)/Mail Date \_\_\_\_\_

## **DETAILED ACTION**

### ***Response to Amendment***

- 1) Examiner notes the cancellation of Claims 1-12 and the amendments to Claims 16 and 17 to adjust their dependencies. This does not introduce new matter into the application and is therefore accepted. Claims 13-33 are still pending in the case after amendment.
- 2) In response to the cancellation of Claims 1-12, Examiner withdraws the rejections of Claims 1-12 (as they are no longer pending) and Claims 19-27 (the grounds of the rejection have changed, as Claims 19-27 depended from Claim 1 which is no longer pending).

### ***Response to Arguments***

- 3) Applicant's arguments filed 18 December 2007 have been fully considered but they are not persuasive.
- 4) Applicant argues that Czech teaches away from the claimed invention by stating that "the temperature should always be kept well below the solution temperature of the base material alloy." (Czech column 5 lines 19-20, emphasis added by applicant). Examiner respectfully disagrees that this reference teaches away.
- 5) Applicant has presented evidence that there are multiple solution temperatures in an alloy by the presence of claims calling for the solution temperature to be at least the solution temperature of a given phase of the alloy and not the entirety of the alloy. In

Applicant's case, this is the lowest solution temperature of any phase present.

Czech's teaching encompasses the entire alloy ("However, the temperature should always be kept well below the solution temperature of the base material alloy," emphasis added by Examiner), which includes the highest solution temperature of a given phase in the alloy, the lowest solution temperature of a given phase in an alloy, and all points in between. Therefore, Czech teaches a solution temperature within the scope of Applicant's claims and Examiner maintains all previous grounds of rejection made in the previous Office Action based on this argument.

***Claim Rejections - 35 USC § 102***

- 6) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
- a) A person shall be entitled to a patent unless –
- i) (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 7) Claims 13, 15-16, 18 and 30-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Czech et al (European Patent 0525545, hereinafter '545).
- 8) With regard to Claim 13, '545 teaches a method for refurbishing a gas turbine blade made from a textured superalloy body coated with a protective coating (Page 2 Lines 22-24 and Lines 35-37), the method comprising the steps of:

Art Unit: 1792

- a) Coating a surface of said body with a high temperature stable surface coating, thereby covering said protective coating (Page 3 Lines 52-55 and Page 5 Lines 17-21);
  - b) Performing a solution heat treatment on the body, thereby maintaining said thermally stable surface coating (Page 5, Lines 17-21, re-diffusion treatment);
  - c) Removing jointly said surface coating and said protective coating (Page 7 Lines 37-54; the remnants of the protective coating, being inside the aluminide layer, will be removed along with the aluminide layer); and
  - d) Providing a second protective coating on said body (Page 7 Lines 55-57).
- 9) With regard to Claim 15, '545 teaches the method according to Claim 13, wherein:
- a) Said solution heat treatment is performed with a temperature above 1100°C (Page 5 Lines 17-21).
- 10) Claim 18 is rejected on the same basis as Claim 15.
- 11) With regard to Claim 16, '545 teaches a method for refurbishing a gas turbine blade made from a textured superalloy body coated with a protective coating, the method comprising the steps of:
- a) Removing the protective coating (Page 3 Lines 29-34);
  - b) Coating a surface of said body with a high temperature stable surface coating (Page 3 Lines 52-55 and Page 5 Lines 17-21);
  - c) Performing a solution heat treatment on said body, thereby maintaining said thermally stable surface coating (Page 5, Lines 17-21, re-diffusion treatment);
  - d) Removing the surface coating (Page 7 Lines 37-54); and

e) Providing a second protective coating on said body (Page 7 Lines 55-57).

12) With regard to Claim 30, '545 teaches a method for recovering texture of a textured article which is made from a superalloy, comprising the steps of:

a) Creating on the surface of the article a high temperature stable surface coating (Page 3 Lines 52-55 and Page 5 Lines 17-21);

b) Performing a solution heat treatment on said article wherein a  $\gamma$ -phase and a  $\gamma'$ -phase are present in said superalloy and the temperature of said solution heat treatment is at least the solution temperature of the  $\gamma'$ -phase, thereby maintaining said thermally stable surface coating (Page 5 Lines 17-21; the phases are present by virtue of the sulphur inclusions which form along grain boundaries which form along phase boundaries; the method of diffusion requires operation at the solution temperature of the  $\gamma'$ -phase for anything to occur);

c) Restoring the microstructure of the textured article (Page 5 Lines 37-40, wherein the single-crystal structure is restored by removing the outer non-single-crystal structure);

d) And suppressing grain recrystallization by providing bulk conditions which assure a higher temperature threshold for grain recrystallization (inherent by the properties of solid-air and solid-solid heat interfaces).

13) With regard to Claim 31, which includes all the limitations of Claim 30 above, '545 teaches the method of Claim 30, wherein:

a) Said article is a gas turbine component (Page 2 Lines 1-3).

Art Unit: 1792

14)With regard to Claim 32, which includes all the limitations of Claim 31 above, '545

teaches the method of Claim 30, wherein:

a) Said gas turbine component is a blade or vane (Page 2 Lines 1-3).

***Claim Rejections - 35 USC § 103***

15)The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

- a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

16)The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

- a) Determining the scope and contents of the prior art.
- b) Ascertaining the differences between the prior art and the Claims at issue.
- c) Resolving the level of ordinary skill in the pertinent art.
- d) Considering objective evidence present in the application indicating obviousness or nonobviousness.

17)This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order

for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

18) Claims 14, 17, and 28-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over '545 as applied to Claim 3 above, and further in view of '283.

19) With regard to Claim 14, which includes all the limitations of Claim 13 above, '545 teaches the method according to Claim 13, except for the following limitation:

i) A  $\gamma$ -phase and a  $\gamma'$ -phase are present in said superalloy and the temperature of said solution heat treatment is at least the solution temperature of the  $\gamma'$ -phase.

b) '283 discusses superalloys suitable for use in gas turbine components.

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have applied the method of '545 to gas turbine components formed as discussed in '283 since '545 wants to refurbish gas turbine parts and '283 teaches methods and materials that are suitable for that use.

c) '283 further teaches that superalloy solution heat treatments, when applied to either single crystal or directionally solidified alloy articles, are performed at the solution temperature of the superalloy, and further that this solution temperature is below the solidus temperature of the superalloy. Further, the diffusion temperature must be at least the  $\gamma'$ -temperature, otherwise diffusion would not be possible.

20) Claim 17 is rejected on the same basis as Claim 14.

- 21) Claims 28 and 29 are rejected on the same basis as Claim 14, as the further limitation wherein the protective coating will suppress the grain recrystallization properties is inherent to this process.
- 22) Claim 33 is rejected under 35 U.S.C. 103(a) as being unpatentable over '545 as applied to Claim 30 above, and further in view of Haydon et al (European Patent 0186797, hereinafter '797).
- a) With regard to Claim 33, which includes all the limitations of Claim 30 above, '545 teaches the method according to Claim 30, except for the following limitation:
- i) Said superalloy is cobalt-based with precipitations or carbides that provide a strengthening mechanism similar to a  $\gamma$ -phase in Nickel based alloys.
- b) '797 teaches a cobalt-based alloy with carbon and monocarbide-forming material inclusions added for the purpose of providing enhanced strengthening mechanisms to the alloy (Page 2 Line 22 – Page 3 Line 36).
- c) Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have performed the method of '545 on gas turbines formed by the material of '797 because '545 wants to refurbish gas turbine components and '797 teaches a material that is known for use in gas turbine components.

***Claim Rejections - 35 USC § 112***

- 23) The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 1792

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

24) Claims 19 - 24 recite the limitation "The method according to Claim 1". There is insufficient antecedent basis for this limitation in the claims as Claim 1 has been canceled.

25) Claims 25-27 recite the limitation "The method according to Claim 24". While this in itself is proper as Claim 24 exists, there is insufficient antecedent basis for this limitation in the claims as Claim 24 refers to Claim 1, and Claim 1 has been canceled.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL G. MILLER whose telephone number is (571)270-1861. The examiner can normally be reached on M-F 7-4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tim Meeks can be reached on (571) 272-1423. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
